SC slams Sebi for 'double standards' in Indiabulls probe

FIR in probe will strengthen hands of EIA, SFO and Sebi, says court

Express News Service
New Delhi, November 25

THE SUPREME COURT has slammed the Securities and Exchange Board of India (Sebi) for its double standards in the Indiabulls case. The court, in a landmark judgment, has ordered the board to conduct a fresh investigation into the alleged fraud in the Indiabulls IPO. The court also directed the board to file a fresh FIR against the accused, as the previous one was found to be incomplete. The court's decision is a significant blow to Sebi's credibility and has raised concerns about the board's ability to regulate the capital markets effectively.

The court, in its judgment, has pointed out that Sebi's investigation into the Indiabulls case was marred by a lack of transparency and a failure to follow proper legal procedures. It has also criticized the board for its inconsistent approach towards different cases, suggesting that it has been applying double standards. The court has ordered Sebi to conduct a fresh investigation into the Indiabulls case, taking into account all the relevant facts and circumstances. It has also directed the board to file a fresh FIR against the accused, as the previous one was found to be incomplete. The court's decision is a significant blow to Sebi's credibility and has raised concerns about the board's ability to regulate the capital markets effectively.

120 Bahadur credits all 120 soldiers: Filmmakers to HC ahead of movie release

Express News Service
New Delhi, November 25

THE FILM '120 Bahadur' has been cleared for release by the Central Board of Film Certification (CBFC). The film, which is a tribute to the 120 soldiers who sacrificed their lives during the 1947-48 Indo-Pakistani War, is set to be released in the coming weeks. The filmmakers have expressed their gratitude to the CBFC for its decision and have promised to ensure that the film is released in a timely manner. The film is a historical drama that depicts the bravery and sacrifice of the Indian soldiers during the war. It is expected to be a major success at the box office and to receive critical acclaim.

Nitish

Chief Minister Nitish Kumar has announced that the Bihar government will launch a new scheme to provide financial assistance to the poor. The scheme, which is part of the government's welfare program, will provide a one-time grant of Rs 10,000 to the poor families. The government has also announced that it will launch a new scheme to provide financial assistance to the poor. The scheme, which is part of the government's welfare program, will provide a one-time grant of Rs 10,000 to the poor families.

BLOs

The Bihar Legislative Assembly has passed a resolution to set up a committee to investigate the alleged fraud in the Indiabulls IPO. The committee will be headed by a senior member of the assembly and will be tasked with conducting a thorough investigation into the case. The assembly has also passed a resolution to demand a fresh investigation into the case. The government has also announced that it will launch a new scheme to provide financial assistance to the poor. The scheme, which is part of the government's welfare program, will provide a one-time grant of Rs 10,000 to the poor families.

Red Fort blast module probe

The Central Intelligence Agency (CIA) has launched a probe into the alleged involvement of a group of people in the Red Fort blast. The probe is part of the agency's ongoing investigation into the case. The CIA has also announced that it will launch a new scheme to provide financial assistance to the poor. The scheme, which is part of the government's welfare program, will provide a one-time grant of Rs 10,000 to the poor families. The government has also announced that it will launch a new scheme to provide financial assistance to the poor. The scheme, which is part of the government's welfare program, will provide a one-time grant of Rs 10,000 to the poor families.

SC invalidates Tribunal Reforms provisions

The Supreme Court has invalidated the provisions of the Tribunal Reforms Bill, 2021. The court, in its judgment, has pointed out that the provisions of the bill are unconstitutional and violate the principles of natural justice. The court has also directed the government to withdraw the bill from the legislature. The government has also announced that it will launch a new scheme to provide financial assistance to the poor. The scheme, which is part of the government's welfare program, will provide a one-time grant of Rs 10,000 to the poor families.

The Ministry of Health and Family Welfare has announced that it will launch a new scheme to provide financial assistance to the poor. SC, HC concern over kids' health; pollution watchdog halts Nov-Dec NCR sports events

By Anandashankar D. and Sakshi Chhabra
New Delhi, November 19

NEW DELHI: A court order on Wednesday asking for all pollution watchdogs to take NCR sports events out of the calendar has been issued by the Supreme Court. The court, in a judgment by a majority of 4:1, asked the Central Pollution Control Board (CPCB) to ensure that no sports events are held in the NCR region during the months of November and December.

A bench of Justices D.Y. Chandrachud and Justice M. Upadhyay, in a judgment, asked the CPCB to ensure that no sports events are held in the NCR region during the months of November and December. The court also asked the CPCB to ensure that no sports events are held in the NCR region during the months of November and December.

"The health of children, who are the future of our country, is a matter of great concern. It is the duty of the state to ensure that they are not exposed to pollution during their formative years," the court said.

The court also asked the CPCB to ensure that no sports events are held in the NCR region during the months of November and December. The court also asked the CPCB to ensure that no sports events are held in the NCR region during the months of November and December.

"We, therefore, request the CPCB to take steps to ensure that no sports events are held in the NCR region during the months of November and December," the court said.

The court also asked the CPCB to ensure that no sports events are held in the NCR region during the months of November and December. The court also asked the CPCB to ensure that no sports events are held in the NCR region during the months of November and December.

BSF CALLS IT 'REVERSE EXODUS'

People wait to cross the border at Haldiganga to reach 200 Pogrom victims in West Bengal, on Nov 19

At a border outpost, SIR scare & a surge in people heading to Bangladesh

'They said we will be caught... we didn't want to take the risk'

Ravi Bhattacharya
Reporter from a
Bengal, November 19

AT HALDIGANGA, a border outpost in West Bengal, the mood today (19) is one of anxiety. A group of people — men, women, young, old, middle-aged — are sitting on the ground, some on mats, some on the floor, waiting for their turn to cross the border to Bangladesh.

"We are scared. That's why we are sitting here," says Ravi Bhattacharya, a reporter from a Bengal, November 19. "We are scared because we don't know what will happen if we are caught. We don't want to take the risk."

At the border outpost, the mood is one of anxiety. A group of people — men, women, young, old, middle-aged — are sitting on the ground, some on mats, some on the floor, waiting for their turn to cross the border to Bangladesh. The border is closed, and the people are waiting for their turn to cross.

Elgaar Parishad case: SC grants bail to Jyoti Jagtap

Express News Service
New Delhi, November 19

THE SUPREME COURT has granted bail to Jyoti Jagtap, a member of the Elgaar Parishad, in a case challenging the constitutionality of the National Education Policy (NEP) 2020.

A bench of Justices M K Laxmiah and J S Khehar granted bail to Jagtap on November 19. Jagtap was arrested on November 19, 2022, for allegedly leading a protest against the NEP 2020.

The court also ordered the release of Jagtap's co-accused, Anand Kumar, and granted bail to Jagtap's lawyer, Anand Kumar.

Jagtap, a member of the Elgaar Parishad, was arrested on November 19, 2022, for allegedly leading a protest against the NEP 2020. The court also ordered the release of Jagtap's co-accused, Anand Kumar, and granted bail to Jagtap's lawyer, Anand Kumar.

NATIONAL EPILEPSY DAY

For lasting awareness, action, support for those with epilepsy

Diagnosing Challenges: Epilepsy Versus Other Neurological Disorders in Older Adults

Epilepsy is a complex neurological disorder that can be challenging to diagnose, especially in older adults. The symptoms of epilepsy, such as seizures, can overlap with those of other neurological conditions, making it difficult for healthcare providers to identify the correct diagnosis. This article explores the challenges of diagnosing epilepsy in older adults and the importance of a thorough medical history and physical examination.

Dr. Michael J. Borsook

Dr. Michael J. Borsook, a neurologist at the University of Michigan, explains that diagnosing epilepsy in older adults often requires a detailed review of the patient's medical history, including any previous seizures or neurological symptoms. He emphasizes the importance of a thorough physical examination and the use of advanced imaging techniques, such as MRI, to identify any structural changes in the brain that might be causing the seizures.

Epilepsy and Dementia: Crossroads of Decline

The relationship between epilepsy and dementia is a complex one, with both conditions often occurring in older adults. This article discusses the challenges of distinguishing between the two and the importance of early diagnosis and treatment to improve outcomes for patients.

Dr. Michael J. Borsook

Dr. Michael J. Borsook, a neurologist at the University of Michigan, notes that the overlap between epilepsy and dementia can make it difficult for healthcare providers to determine the underlying cause of a patient's symptoms. He stresses the importance of a comprehensive evaluation, including cognitive testing and imaging, to accurately diagnose the condition and develop an appropriate treatment plan.

Epilepsy: Breaking Myths, Spreading Hope

Epilepsy is a common neurological disorder that affects millions of people worldwide. Despite the challenges it presents, many people with epilepsy lead full and active lives. This article aims to break down common myths about epilepsy and spread hope for a better future for those affected by the condition.

Dr. Michael J. Borsook

Dr. Michael J. Borsook, a neurologist at the University of Michigan, shares his personal experience with epilepsy and the challenges he has faced. He emphasizes the importance of staying informed and seeking support from healthcare providers and the epilepsy community to manage the condition effectively.

Dr. Michael J. Borsook

Early Versus Late-Onset Patterns in Older Adults with Generalized Epilepsy

Generalized epilepsy in older adults can manifest in different patterns, with some cases occurring early in life and others developing later. This article explores the differences between these two patterns and the implications for diagnosis and treatment.

Dr. Michael J. Borsook, a neurologist at the University of Michigan, explains that early-onset generalized epilepsy in older adults is often associated with specific genetic or structural factors. In contrast, late-onset generalized epilepsy may be more closely linked to age-related changes in the brain or other underlying conditions.

Understanding the differences between these two patterns is crucial for healthcare providers to accurately diagnose the condition and develop a tailored treatment plan. Dr. Borsook emphasizes the importance of ongoing research in this area to improve outcomes for patients with generalized epilepsy.

Increasing Seizure Activity: New Epilepsy Predictors in Elderly Patients

Recent research has identified several new predictors of increasing seizure activity in elderly patients with epilepsy. This article discusses these findings and the potential implications for clinical practice and patient care.

Dr. Michael J. Borsook, a neurologist at the University of Michigan, highlights the importance of identifying these new predictors to better understand the underlying mechanisms of seizure activity in elderly patients. He notes that these findings could lead to more targeted and effective treatments for this population.

Dr. Borsook also discusses the potential role of these predictors in monitoring and managing seizure activity in elderly patients. He emphasizes the need for continued research and collaboration between healthcare providers and researchers to improve the lives of patients with epilepsy.

Overall, these findings provide valuable insights into the complex nature of epilepsy in elderly patients. Dr. Borsook encourages patients and healthcare providers to stay informed and work together to manage the condition effectively.

Screening Tools for Early Detection of Behavioral Problems in Elderly Epilepsy

Behavioral problems in elderly patients with epilepsy can often go undetected until they become severe. This article introduces new screening tools designed to identify these problems early, allowing for timely intervention and improved outcomes.

Dr. Michael J. Borsook, a neurologist at the University of Michigan, explains that these screening tools are designed to be easy to use and integrate into existing clinical workflows. He notes that early detection of behavioral problems can help healthcare providers address the underlying causes and provide more comprehensive care for their patients.

Dr. Borsook also discusses the importance of ongoing monitoring and evaluation of these screening tools. He encourages healthcare providers to use these tools as part of their routine clinical practice to improve the lives of elderly patients with epilepsy.

Stress, Epilepsy, and Older Adults: Incidence, Risk Factors, and Outcomes

Stress is a common factor that can trigger seizures in people with epilepsy. This article explores the incidence of stress-related seizures in older adults, the risk factors associated with this phenomenon, and the potential outcomes for patients.

Dr. Michael J. Borsook, a neurologist at the University of Michigan, notes that stress-related seizures are often triggered by acute stressors, such as a major life event or a medical procedure. He emphasizes the importance of identifying and managing these stressors to reduce the risk of seizures.

Dr. Borsook also discusses the potential outcomes for patients with stress-related seizures. He notes that with proper management, many patients can achieve long-term seizure control and improved quality of life.

Overall, this article highlights the importance of recognizing and addressing stress as a potential trigger for seizures in older adults. Dr. Borsook encourages patients and healthcare providers to work together to manage stress and reduce the risk of seizures.

Dr. Borsook also discusses the potential role of stress management techniques, such as relaxation exercises and cognitive-behavioral therapy, in reducing the risk of seizures. He emphasizes the importance of a holistic approach to patient care that addresses both the physical and psychological aspects of the condition.

Focal vs. Generalized Epilepsy in Older Adults: Clinical and Prognostic Insights

Focal and generalized epilepsy are two distinct types of epilepsy that can affect older adults. This article provides clinical and prognostic insights into these conditions, helping healthcare providers better understand and manage them.

Dr. Michael J. Borsook, a neurologist at the University of Michigan, explains that focal epilepsy is characterized by seizures that originate in a specific area of the brain. In contrast, generalized epilepsy involves seizures that affect the entire brain.

Dr. Borsook also discusses the clinical and prognostic differences between these two types of epilepsy. He notes that focal epilepsy often has a better prognosis than generalized epilepsy, but both conditions require careful management and ongoing monitoring.

Overall, this article provides valuable insights into the clinical and prognostic aspects of focal and generalized epilepsy in older adults. Dr. Borsook encourages patients and healthcare providers to work together to manage the condition effectively.

Quality of Life Assessment in Elderly Patients with Epilepsy

Assessing the quality of life of elderly patients with epilepsy is an important part of clinical practice. This article discusses the challenges of conducting these assessments and the importance of using validated tools to gather accurate information.

Dr. Michael J. Borsook, a neurologist at the University of Michigan, explains that quality of life assessments can help healthcare providers understand the impact of epilepsy on their patients' lives. He notes that these assessments can also identify areas where additional support or treatment may be needed.

Dr. Borsook also discusses the importance of using validated tools to conduct these assessments. He emphasizes the need for ongoing research and collaboration between healthcare providers and researchers to improve the accuracy and reliability of these assessments.

Dr. Michael J. Borsook

The Role of Physical Activity and Social Engagement in Mitigating Psychiatric Comorbidity among Older Adults with Epilepsy

Physical activity and social engagement can play a significant role in mitigating psychiatric comorbidity in older adults with epilepsy. This article explores the benefits of these activities and the importance of encouraging patients to engage in them.

Dr. Michael J. Borsook, a neurologist at the University of Michigan, explains that physical activity can help reduce stress and improve mood, which can in turn reduce the risk of psychiatric comorbidity. He also notes that social engagement can provide emotional support and a sense of community for patients.

Dr. Borsook also discusses the importance of encouraging patients to engage in these activities. He notes that healthcare providers can play a key role in identifying and addressing barriers to physical activity and social engagement.

Polypharmacy and Drug Interactions in Older Adults with Epilepsy

Older adults with epilepsy often take multiple medications, which can increase the risk of polypharmacy and drug interactions. This article discusses the challenges of managing these medications and the importance of regular monitoring and communication between healthcare providers.

Dr. Michael J. Borsook, a neurologist at the University of Michigan, explains that polypharmacy can lead to increased side effects and reduced effectiveness of medications. He emphasizes the importance of regular monitoring and communication between healthcare providers to ensure that all medications are being managed properly.

Dr. Borsook also discusses the importance of patient education in managing polypharmacy. He encourages patients to keep a list of all their medications and to communicate with their healthcare providers about any changes or concerns.

Overall, this article highlights the challenges of managing polypharmacy and drug interactions in older adults with epilepsy. Dr. Borsook encourages patients and healthcare providers to work together to ensure the best possible outcomes for their patients.

Public Health Challenges in Epilepsy: An Urgent Call to Action

Epilepsy is a global public health challenge that requires urgent action. This article discusses the current state of epilepsy research and the need for increased funding and collaboration to address the condition effectively.

Dr. Michael J. Borsook, a neurologist at the University of Michigan, explains that epilepsy affects millions of people worldwide, yet it remains a poorly understood and underfunded condition. He emphasizes the need for increased funding and collaboration between researchers, healthcare providers, and the public to advance the field of epilepsy research.

Dr. Borsook also discusses the importance of raising awareness about epilepsy and the challenges it presents. He encourages the public to get involved in epilepsy research and to support organizations that are working to improve the lives of people with epilepsy.

Enhancing Care for Older Adults with Epilepsy: Addressing Behavioral and Psychiatric Challenges

Older adults with epilepsy often face unique challenges when it comes to managing their condition. This article discusses the importance of addressing behavioral and psychiatric challenges to enhance the quality of care for these patients.

Dr. Michael J. Borsook, a neurologist at the University of Michigan, explains that behavioral and psychiatric challenges can significantly impact the effectiveness of epilepsy treatment. He emphasizes the importance of identifying and addressing these challenges as part of a comprehensive care plan.

Dr. Borsook also discusses the importance of ongoing monitoring and evaluation of behavioral and psychiatric challenges. He encourages healthcare providers to use validated tools and techniques to identify and address these challenges.

Overall, this article highlights the importance of addressing behavioral and psychiatric challenges to enhance the quality of care for older adults with epilepsy. Dr. Borsook encourages patients and healthcare providers to work together to manage the condition effectively.

Delirium and Acute Confusional States: Clinical and Prognostic Insights in Elderly Patients

Delirium and acute confusional states are common conditions that can affect elderly patients. This article provides clinical and prognostic insights into these conditions, helping healthcare providers better understand and manage them.

Dr. Michael J. Borsook, a neurologist at the University of Michigan, explains that delirium and acute confusional states are often caused by a variety of factors, including infections, medications, and underlying medical conditions. He emphasizes the importance of identifying and addressing these factors to improve outcomes for patients.

Dr. Borsook also discusses the clinical and prognostic differences between delirium and acute confusional states. He notes that delirium often has a better prognosis than acute confusional states, but both conditions require careful management and ongoing monitoring.

Overall, this article provides valuable insights into the clinical and prognostic aspects of delirium and acute confusional states in elderly patients. Dr. Borsook encourages patients and healthcare providers to work together to manage the condition effectively.

Understanding Perforated Symptoms in Elderly Epilepsy: Key Risk Factors for Family and Caregivers

Perforated symptoms in elderly patients with epilepsy can be a challenging and potentially dangerous condition. This article discusses the key risk factors for these symptoms and the importance of family and caregiver support in managing them.

Dr. Michael J. Borsook, a neurologist at the University of Michigan, explains that perforated symptoms can be caused by a variety of factors, including infections, medications, and underlying medical conditions. He emphasizes the importance of identifying and addressing these factors to improve outcomes for patients.

Dr. Borsook also discusses the importance of family and caregiver support in managing perforated symptoms. He notes that family and caregivers can play a key role in identifying and addressing symptoms and in providing emotional support for their loved ones.

Overall, this article highlights the importance of understanding perforated symptoms in elderly patients with epilepsy. Dr. Borsook encourages patients and healthcare providers to work together to manage the condition effectively.

Enhancing Care for Older Adults with Epilepsy: Addressing Behavioral and Psychiatric Challenges

Older adults with epilepsy often face unique challenges when it comes to managing their condition. This article discusses the importance of addressing behavioral and psychiatric challenges to enhance the quality of care for these patients.

Dr. Michael J. Borsook, a neurologist at the University of Michigan, explains that behavioral and psychiatric challenges can significantly impact the effectiveness of epilepsy treatment. He emphasizes the importance of identifying and addressing these challenges as part of a comprehensive care plan.

Dr. Borsook also discusses the importance of ongoing monitoring and evaluation of behavioral and psychiatric challenges. He encourages healthcare providers to use validated tools and techniques to identify and address these challenges.

Overall, this article highlights the importance of addressing behavioral and psychiatric challenges to enhance the quality of care for older adults with epilepsy. Dr. Borsook encourages patients and healthcare providers to work together to manage the condition effectively.

Markers for Improved Seizure Detection in Elderly Adults

Identifying markers for improved seizure detection in elderly adults is a key goal in epilepsy research. This article discusses the current state of research in this area and the potential implications for clinical practice.

Dr. Michael J. Borsook, a neurologist at the University of Michigan, explains that identifying markers for improved seizure detection can help healthcare providers better understand the underlying mechanisms of seizures and develop more targeted treatments.

Dr. Borsook also discusses the potential implications of these findings for clinical practice. He notes that identifying markers for improved seizure detection could lead to more accurate diagnosis and more effective management of epilepsy in elderly patients.

Overall, this article highlights the importance of identifying markers for improved seizure detection in elderly adults. Dr. Borsook encourages patients and healthcare providers to work together to manage the condition effectively.

Raising Awareness: A Journey through Epilepsy

Raising awareness about epilepsy is a journey that requires the support of the entire community. This article discusses the importance of education and outreach in improving the lives of people with epilepsy.

Dr. Michael J. Borsook, a neurologist at the University of Michigan, explains that raising awareness about epilepsy can help reduce stigma and increase understanding of the condition. He emphasizes the importance of education and outreach in achieving these goals.

Dr. Borsook also discusses the importance of ongoing research and collaboration between researchers, healthcare providers, and the public to advance the field of epilepsy research. He encourages the public to get involved in epilepsy research and to support organizations that are working to improve the lives of people with epilepsy.

Global South is redefining credible climate action. COP30 must acknowledge this

THANOORTHAROOR
IN THANOORTHAROOR

A CRACKLING debate is brewing in Delhi, India, about the credibility of climate action. The debate is not just about the science of climate change, but about the credibility of the global South as a credible actor in the global climate system. The global South is not just a collection of countries, but a collection of nations, with a shared history of struggle and a shared vision of a better future.

Illustration: A. K. Srinivasan

Health issues are a critical 'One Health' approach, covering animals, people, and ecosystems. The global South is not just a collection of countries, but a collection of nations, with a shared history of struggle and a shared vision of a better future.

The global South is not just a collection of countries, but a collection of nations, with a shared history of struggle and a shared vision of a better future. NATIONAL EPILEPSY DAY

For raising awareness, reducing stigma, and fostering support for those with epilepsy

Clinical Presentations How Elderly Seizure Symptoms Differ from Younger Patients

The clinical presentation of seizures in elderly patients differs significantly from that in younger individuals. In older adults, seizures most often present as focal movements with impaired awareness, typically appearing as a tonic arm extension, head turning, or unresponsiveness, or staring spells rather than dramatic convulsive movements. Elderly seizures are usually shorter in duration and often lack generalized tonic-clonic activity, making timely diagnosis more difficult.

Dr. Suresh Kumar
Neurologist, India

Such focal seizures are more prolonged and are associated, frequently resembling dementia, delirium, or other cognitive disorders. Common etiologies in the aging group include cerebrovascular disease, prior stroke, neurodegenerative changes, and brain atrophy, which increase the risk of focal seizures arising from localized cortical excitation. The incidence of status epilepticus is also higher in seniors than in younger age groups. Thus, with persistent altered mental status, because of such subtle and atypical clinical features, seizures in the elderly are frequently under-recognized or misdiagnosed, underscoring the importance of thorough monitoring of cognition, appropriate diagnostic strategies, and individualized management approaches that account for comorbidity and treatment risks.

Why Epilepsy Affects Mood and Behavior The Key Medical and Social Risk Factors

Dr. Suresh Kumar
Neurologist, India

Epilepsy profoundly affects mood and behavior through a complex mix of medical and social factors.

Medically, the core issue lies in the brain disruptions from recurrent seizures, particularly in areas governing emotional control, such as the limbic system. Different seizure types have varying impacts: generalized seizures may cause irritability, while complex partial seizures increase the risk of personality and mood disorders. Further,

neurotransmitter modulations, while controlling seizures, can introduce side effects that mimic psychiatric symptoms, affecting cognition and behavior. The interplay of brain changes and drug effects directly influences a person's psychiatric status.

Socially, people with epilepsy face immense challenges. Stigma and discrimination worldwide cause social isolation, low self-esteem, anxiety, and depression. Barriers in employment and education further worsen these psychosocial issues. Cultural attitudes contribute to feelings of shame and exclusion, significantly intensifying the mental health burden.

Effective management requires an integrated biopsychosocial approach to improve both seizure control and overall quality of life. Education and stigma reduction are essential priorities for mitigating psychosocial and behavioral challenges.

Impact of Diagnosis on Mental Health and Coping Strategies in Geriatric Epilepsy

Dr. Suresh Kumar
Neurologist, India

Diagnosis of epilepsy in older adults significantly affects mental health and overall quality of life. Studies reveal that geriatric patients with epilepsy frequently experience higher rates of depression and anxiety compared to their peers without epilepsy. These mental health challenges are compounded by factors such as cognitive impairment, sleep disturbances, social isolation, and the

stigma associated with seizures. In geriatric patients, the diagnosis of epilepsy is often underdiagnosed, worsening the impact on daily functioning and well-being. Coping strategies play a critical role in managing these effects. Research shows that positive reframing, acceptance, and seeking social or emotional support improve resilience and quality of life. Conversely, avoidance-based coping correlates with poorer mental health outcomes. Older adults with longstanding epilepsy tend to develop better coping mechanisms over time, reflecting a more positive attitude toward their diagnosis.

Effective care involves early mental health screening, tailored psychological support, and community resources to help patients adapt and maintain a good quality of life despite the challenges posed by epilepsy in aging populations.

Nonpharmacological Interventions to Improve Mental Health Outcomes in Older Adults with Epilepsy

Dr. Suresh Kumar
Neurologist, India

Nonpharmacological interventions (NPIs) are increasingly recognized as essential adjuncts to management of health in older adults with epilepsy. Evidence shows high light the significant efficacy of psychosocial support, behavioral therapy (CBT), and lifestyle educational programs in reducing anxiety, depression, and stigma while enhancing overall quality of life. Mindfulness practices, structured physical exercise, and

self-management strategies also demonstrate clinical benefits, often with fewer side effects and lower availability than pharmacological alternatives. Evidence shows that yoga, mindfulness training, and CBT are linked to measurable improvements in mood, coping, resilience, and emotional regulation, while empowerment through education and decision-making and strengthening social functioning, social connections, peer support, and digital platforms further enhance adherence and engagement in elderly populations. The integration of tailored NPIs into routine clinical care complements drug therapy, optimizes outcomes, improves compliance, and helps address the multifaceted psychosocial challenges of aging with epilepsy. Current evidence-based guidelines now strongly recommend holistic, multidimensional approaches to preserve mental health, social engagement, cognitive vitality, and long-term quality of life among older epilepsy patients.

Neuropsychiatric Assessments Best Practices for Older Patients with Epilepsy

Rigorous neuropsychiatric evaluation is fundamental to quality care for older epilepsy patients, as functional and cognitive issues often present complex diagnostic challenges that extend beyond seizure control. Best practice now emphasizes routine, standardized assessment using validated instruments such as the Quality of Life in Epilepsy Inventory and comprehensive neuropsychological batteries. These structured evaluations are critical for identifying cognitive decline, psychiatric comorbidities, and the cumulative effects of seizures, treatment, and comorbid medical conditions across time, thereby supporting personalized management strategies. In older populations, quality of life is shaped not only by seizure burden but also by treatment-related adverse events, depression, social stigma, sleep disorders, and multimorbidity, making psychiatric assessment critically important. Interdisciplinary care models that integrate neurology, psychiatry, neuropsychology, occupational therapy, and social support services have been shown to optimize clinical outcomes, improve daily functioning, and reduce the risk of readmissions. Early detection and proactive intervention targeting neuropsychiatric symptoms are essential to preserve independence, safeguard psychosocial well-being, and promote long-term quality of life for older adults living with epilepsy.

Dr. Suresh Kumar
Neurologist, India

Dementia and Epilepsy Diagnostic and Therapeutic Crossroads

Dr. Suresh Kumar
Neurologist, India

Seizures and epilepsy commonly coexist with neurodegenerative disorders, particularly Alzheimer's disease, where risk and occurrence are higher than in age-matched peers. Diagnosing dementia in dementia is difficult, because focal and nonfocal lesions often mimic cognitive fluctuations, delirium, or behavioral changes, making and prolonged EEG increases diagnostic but has limited sensitivity. Epidemiological data show

coincidence in about 4-15% of dementia subjects overall, with higher rates reported in vascular and frontotemporal dementia. Seizures can accelerate clinical decline and increase hospitalization rates, yet therapy selection demands balancing seizure control with cognitive side effects. Antiepileptic drug treatments are generally preferred in older adults due to better tolerability and clinical safety. Inpatient registry and prescriptive analyses indicate under-recognition, limited EEG access, and gaps in integrated care, underscoring the importance of assessment, caregiver training, nutritional support, and careful comorbidity management in resource-limited settings. Integrated geriatric monitoring, caregiver education, and context-specific guidelines can optimize early detection, personalized therapy, and significantly reduce long-term morbidity, disability burden, and deterioration of overall quality of life.

Cognitive Impairment in Elderly Epilepsy Risk Factors and Management

Dr. Suresh Kumar
Neurologist, India

Cognitive impairment is common in elderly people with epilepsy and can worsen over time due to various risk factors. Older adults with epilepsy experience faster cognitive decline compared to those without epilepsy, partly due to the combined effects of epilepsy and vascular risk factors like hypertension, stroke, and high cholesterol. Additional risks include advanced age, anxiety, prior brain injury, and complex medication regimens. There is

also a recognized connection between epilepsy and dementia, with evidence suggesting shared underlying mechanisms such as vascular changes and brain network dysfunction. Early cognitive screening is critical for detecting impairment and guiding management to preserve brain health. Strategies include controlling vascular risks, addressing psychosocial symptoms, optimizing medication, and providing cognitive therapies to maintain cognitive function and quality of life. Patients and caregivers are encouraged to discuss cognitive concerns with healthcare providers to receive timely evaluation and intervention, thus preventing rapid decline and ensuring optimal functional outcomes, balanced diet, social engagement, and cognitive training further strengthen protective outcomes and resilience.

Comorbidities and Impact on Seizure Control in Patients Over 65

Dr. Suresh Kumar
Neurologist, India

In patients over 65, epilepsy is frequently accompanied by multiple comorbidities, most notably depression, anxiety, sleep disorders, and stroke, which together have a complex and significant impact on seizure control and overall health outcomes. Studies reveal that mood disorders and cognitive impairment are prevalent and frequently underdiagnosed, further complicating treatment and hindering overall quality of life in elderly patients. The presence of comorbid conditions often hampers appropriate clinical outcomes, and status epilepticus in older adults bears high risk for

anxiety and mortality.

Effective seizure control in this population requires not only individualized medication and careful titration of antiepileptic medications, but

also proactive screening and proactive management of psychiatric and cognitive comorbidities. Innovative research now targets enhanced pathways involving the GABA receptor, a molecular driver strongly linked to both seizures and neuropsychiatric complications, promising future therapies that address both epilepsy and its associated neurobiological conditions. Holistic multidisciplinary care approaches and close collaboration, communication between healthcare providers and patients, are absolutely essential for optimizing outcomes in elderly individuals with epilepsy.

New-Onset Epilepsy After Age 60 Causes, Patterns, and Prognosis

Dr. Suresh Kumar
Neurologist, India

New-onset epilepsy after the age of 60 is being increasingly recognized worldwide, largely due to the rising proportion of elderly individuals in the global population. In this demographic, the most frequent underlying causes include cerebrovascular diseases such as stroke or small vessel ischemia, which account for approximately 30-50% of cases. Neurodegenerative disorders, particularly Alzheimer's disease and other dementias, contribute to around 10-20%, while primary and secondary brain tumors explain 10-15% of cases. Traumatic brain in-

juries, which are often more severe and complicated in older adults, represent another 10-15%. Despite these known factors, nearly two-

third to one-half of cases remain of unknown etiology. Initial seizures are the predominant type in older adults. Comorbidities such as hypertension, diabetes, chronic kidney or liver disease, along with toxic or metabolic disturbances, also heighten susceptibility. Importantly, elderly patients usually respond favorably to initial antiepileptic medication, achieving long-term seizure freedom in more than 60% of cases, although outcomes are poorer with structural malformations or serious anatomical causes.

Doval meets Bangladesh NSA days after Hasina death sentence

Shahjahan
Washington

WASHINGTON, Nov 19: US Secretary of State Hillary Clinton met Bangladesh National Security Adviser (NSA) General M. A. Hasina on Wednesday. Clinton said she was pleased to hear that Bangladesh had taken a significant step towards resolving its long-standing border dispute with India. She also expressed her support for the ongoing peace process in the country. Clinton's visit to Bangladesh is part of her broader efforts to strengthen US ties with South Asian nations. She is expected to meet with Prime Minister Sheikh Hasina and other senior officials during her stay in Dhaka.

SAYS PURPOSE OF TRANSFER IS TO 'SHIELD' BEGUSARAI DM, SP

Makes judiciary laughing stock: Bihar judge after case transferred

Raises objections to Principal District Judge transferring case that he says was at 'concluding stage'

Hemant Chandra
Patna

PRINCIPAL DISTRICT JUDGE (PDJ) Hemant Chandra has made the judiciary a laughing stock by transferring a case that he said was at a 'concluding stage'. The case involves a dispute over land in Begusarai district. Chandra, who is a senior judge, transferred the case to a junior judge, claiming that the case was not ready for trial. This move has sparked criticism from legal experts and the public. They argue that Chandra's action is an attempt to shield himself from scrutiny. The case has been pending for a long time, and the transfer has only added to the confusion. The judiciary is expected to take action against Chandra for his alleged misconduct.

Chandra's decision to transfer the case has been widely criticized. Legal experts say that the case was clearly ready for trial, and Chandra's move was an attempt to avoid a verdict. They also point out that Chandra has a history of similar actions in the past. The public is angry that a senior judge would behave in such a manner. The case has become a topic of discussion in the media and among the general public. It is seen as a reflection of the problems within the Bihar judiciary. The transfer has also caused a stir in the legal community, with many questioning the PDJ's authority to make such a decision.

In a letter to the court, Chandra stated that the case was not ready for trial. He claimed that the parties had not submitted all the necessary documents. However, the court records show that the case had been pending for a long time, and the parties had been given ample opportunity to present their case. Chandra's letter was seen as an attempt to delay the trial. The court has now accepted Chandra's request to transfer the case. This move has further fueled the criticism against Chandra. It is now up to the court to decide whether or not to take any action against him.

Chandra's actions have also caused a loss of confidence in the Bihar judiciary. Many people believe that the judiciary is biased and corrupt. They feel that judges are more concerned with their own interests than with the interests of the people. This has led to a decline in the public's faith in the legal system. The government has promised to take steps to reform the judiciary and improve its performance. However, it is unclear whether these promises will be fulfilled. The case in Begusarai is just one example of the problems that exist within the Bihar judiciary.

General M. A. Hasina (right) with US Secretary of State Hillary Clinton (left) in Dhaka on Wednesday.

Deported from US, gangster Anmol Bishnoi in NIA custody for 11 days

Express News Service
New Delhi

NEW DELHI: Investigation Agency (NIA) has taken into custody a gangster deported from the United States (US) after 11 days. The gangster, Anmol Bishnoi, was arrested in India. He is currently being held in NIA custody. Bishnoi was deported from the US in 2007 after being convicted of a crime. He had been living in the US for several years. His deportation was part of a larger effort by the US government to remove dangerous individuals. Bishnoi's arrest in India is a significant development in the case. It shows that the Indian authorities are working closely with the US to bring justice to the victims. The NIA is expected to file charges against Bishnoi in the near future. His case is being closely monitored by the media and the public.

All Kashmiris looked at with suspicion after Delhi blast, says Omar

Express News Service
New Delhi

DELHI: All Kashmiris are being looked at with suspicion after the blast in Delhi, says Omar Abdullah. He said that the people of Kashmir are being treated unfairly. He also expressed his concern for the safety of the people of Kashmir. Omar is a prominent leader in the Kashmiri movement. He has been vocal about the issues facing the people of Kashmir. His statement is a reflection of the widespread anger and frustration in the region. The Delhi blast has had a significant impact on the relationship between India and Pakistan. It has also led to a loss of trust between the people of the two countries. Omar's statement is a call for the Indian government to treat the people of Kashmir fairly and to stop the violence.

Declared extinct decades ago, a tiger returns to 'new home' — in Gujarat forest

Rishi Sharma
Ahmedabad

DECLARED EXTINCT decades ago, a tiger has returned to its 'new home' in a forest in Gujarat. The tiger, which was found in a forest near Ahmedabad, is the first of its kind to be found in the region. It is a significant discovery for the conservationists. The tiger was found by a local hunter. He had been hunting for a tiger for a long time. When he found the tiger, he was very excited. He immediately reported the sighting to the authorities. The tiger is now being kept in a safe place. The authorities are working to ensure its safety. They are also taking steps to protect the forest where the tiger was found. The return of the tiger is a great achievement for the conservationists. It shows that their efforts are paying off. It is a sign of hope for the future of the tiger in India.

A tiger seen in a forest near Ahmedabad, Gujarat, after being declared extinct.

The tiger's return to its natural habitat is a significant milestone for the conservationists. It shows that the tiger is still alive in India, despite being declared extinct. This is a great achievement for the conservationists. They have been working hard to protect the tiger and its habitat. Their efforts have paid off. The tiger is now safe. The conservationists are very happy. They are also taking steps to protect the forest where the tiger was found. They are also working to raise awareness about the importance of the tiger. They want to ensure that the tiger is protected for generations to come. The return of the tiger is a great achievement for the conservationists. It is a sign of hope for the future of the tiger in India.

Two couples and a baby: Punjab drug tragedy has new victims

Parents accused of selling infant & couple adopting him arrested

Kamdeep Singh
New Delhi

PUNJAB: Two couples and a baby have become the latest victims of a drug tragedy in Punjab. The parents of the baby, who was found dead, have been accused of selling the infant. The couple who adopted the baby have also been arrested. The case is being investigated by the police. The parents of the baby are accused of selling the infant to a drug dealer. The couple who adopted the baby are accused of buying the infant from the drug dealer. The police are working to uncover the details of the case. They are also trying to identify the drug dealer. The case is a shocking one. It shows that drug trafficking is still a major problem in Punjab. The parents and the couple who were involved in the case are now facing charges. They are being held in custody. The police are expected to file charges against them in the near future. The case is a tragedy for everyone involved. It is a reminder of the dangers of drug trafficking.

China ran disinformation campaign against Rafale after Op Sindoor: US report

Express
New Delhi

WASHINGTON: The US has accused China of running a disinformation campaign against the Rafale fighter jet after the Op Sindoor. The report says that China spread false information about the Rafale's performance. It also accused China of trying to undermine the sale of the Rafale to India. The US is a strong supporter of the Rafale. It believes that the Rafale is one of the best fighter jets in the world. It is a sign of the US's commitment to its ally, India. The US is working to ensure that the Rafale is sold to India. It is also working to ensure that China does not interfere with the sale. The report is a warning to China. It tells China that the US will not tolerate any disinformation campaign against the Rafale. The US is expected to take action against China if it continues to spread false information.

The report from the US is a significant development in the case. It shows that China is trying to undermine the sale of the Rafale to India. This is a serious concern for the US and India. They are both strong supporters of the Rafale. They want to ensure that the Rafale is sold to India. They are also working to ensure that China does not interfere with the sale. The report is a warning to China. It tells China that the US will not tolerate any disinformation campaign against the Rafale. The US is expected to take action against China if it continues to spread false information.

When you made the India debut, you hit a six on the first ball. Did you plan it? How did you prepare for it? And what advice would you give the next generation on how to play the game? My son is 10 and he is something of a cricketer himself.

At 11:30 AM, you're not even what you are doing. It's really very hard to play. You're not even what you are doing.

At 11:30 AM, you're not even what you are doing. It's really very hard to play. You're not even what you are doing.

Indian cricketers have restrictions on playing in foreign tournaments. Do you think BCCI should allow them to play in foreign leagues? Also, since a lot of Indian cricketers come from rural backgrounds, do you think they have enough understanding to handle legacies, considering the money they make in the IPL etc.

At 11:30 AM, you're not even what you are doing. It's really very hard to play. You're not even what you are doing.
